

Rolec's revolutionary new EV Charge Online management system enables each and every EV driver to simply pull up to a charge point and, using their mobile phone, tablet or in-car connectivity, login to the charge point and pay on the spot for its use.

The system can be incorporated into almost all of the Rolec EV charge point product range - covering the domestic, commercial and public facing markets – as well as quickly and easily retro-fitted into existing public facing charging pedestals that have been manufactured and installed by other companies.

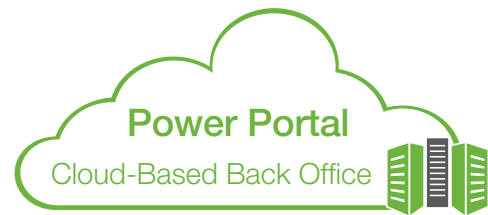

This enables the host to fully open up their charging network to each and every EV driver and allows the EV driver to withdraw from their current costly subscription and membership schemes - and operate on a true Pay-As-You-Go basis.

## EXISTING NETWORK CHARGERS

- Driver Subscription Fees
- Driver Membership Fees
- Driver Connection Fees
- Host Licence Fees

## EV CHARGE ONLINE CHARGERS

- **NO** Driver Subscription Fees
- **NO** Driver Membership Fees
- **NO** Driver Connection Fees
- **NO** Host Licence Fees

Convert your existing charge points to **EV Charge Online** and open up your charging network to **each and every EV driver**
